

## SHA's Historic Bridge Inventory 1809-1947

### Introduction

In 1995, the Maryland State Highway Administration (SHA) joined with the Maryland Historical Trust (MD SHPO) and the Federal Highway Administration (FHWA) to inventory Maryland's state, county and city highway bridges as part of SHA's cultural resources initiative. Through that process, 855 bridges constructed between 1809 and 1947 were identified as historic resources. Based on the National Register of Historic Places' Criteria for Evaluation, 415 bridges were determined to be eligible for inclusion in the National Register. The eligibility determination for each bridge was completed on July 27, 2001 based on consultation between SHA and the MD SHPO.

The reader should be aware that the bridges listed below represent the results of data collection for a specific activity at SHA. They are intended to be used for general planning purposes and general information purposes only. For a number of reasons it may be necessary to change an eligibility determination for an historic bridge; and SHA continues to consult with MD SHPO regarding these decisions. Final determinations of eligibility can be found in the records of MD SHPO.

The bridge list is arranged first by county and then alphabetically by town. Each bridge is named, and while many names are the route number, e.g., US 40 over the Patapsco River, others have formal names, e.g., Blue Bridge, which is MD 942 over the North Branch of the Potomac River. The location of each bridge identifies the body of water or railroad that the bridge crosses. Each bridge has a number; the county bridges are identified by the alpha-numeric system, while the SHA bridges are noted numerically. The last column identifies the Maryland Inventory of Historic Properties number. This number will be found in the records of the Maryland Historical Trust.

SHA identified 13 different bridge types (arch, slab, truss, beam, movable, suspension, timber, rigid frame and cantilever) made from three different materials (masonry, concrete and metal) and has included examples of each type in the Historic Highway Bridge Inventory. Also, many of the bridge types have subtypes such as the movable category includes bascule lifts and swing spans, and the trusses include Pratt, Howe, Pony and Warren, to name a few examples. Although not noted in the list, many of the bridges are the products of some of the most important American and Maryland bridge engineers. Some of the bridges included in the list can also be found in *The Historic Bridges of Maryland*, a photographic essay about these unique historic resources.
