

# ***Traffic Volume Maps***

## ***Introduction***

Data Services Division's Traffic Monitoring System (TMS) Team administers the Maryland State Highway Administration's (SHA) Traffic Monitoring Program. The program is responsible for the collection, processing, analysis, summarization, and dissemination of Maryland highway traffic data and is supported by a comprehensive, user friendly, management information system.

Traffic monitoring data is a strategic resource for SHA and Maryland's Department of Transportation. The data is essential in the planning, design and operation of the statewide road system and the development and implementation of state highway improvement and safety programs. TMS is a product of the ISTEA Act of 1991, which required a traffic data program to effectively and efficiently meet SHA's long-term traffic data monitoring and reporting requirements. The quality control feature of the system allows data edit checks and validation for data from the 91 permanent, continuous automatic traffic recorders (ATRs) and short-term traffic counts.

The Maryland Traffic Volume Maps depict the Annual Average Daily Traffic (AADT) at various locations on Maryland's roadways by county. Traffic Volume data is collected from over 8700 program count stations and 91 ATRs, located throughout Maryland. Program count data is collected (both directions) at regular locations on either a three (3) year or six (6) year cycle depending on type of roadway. Growth Factors are applied to counts which were not taken during the current year and the counts are factored based on the past yearly growth of an associated ATR. Counters are placed for 48 hours on a Monday or Tuesday and are picked up that Thursday or Friday, respectively. The ATR and toll count data is collected on a continuous basis. Toll station data is provided by the Maryland Transportation Authority.

A special numeric code was added to the AADT numbers, starting in 2006, to identify the years when the count was taken. The last digit represents the number of years prior to the actual count. Where "0" represents the current year when data was collected (in 2021), "1" represents the count taken in 2020, "2" represents the count taken in 2019, "3" represents the count taken in 2018 and so forth.

All route, traffic and travel data being made available by SHA in these maps are developed to support internal uses, primarily transportation planning. Any and all data are provided "as is" with the understanding that no warranty of any kind, implied, expressed or statutory, is given with respects to the contents of these maps. Any and all conclusions or products derived from the data are the sole responsibility of the user.

The information presented in these maps is considered public information and may be copied or distributed but must be free of charge.

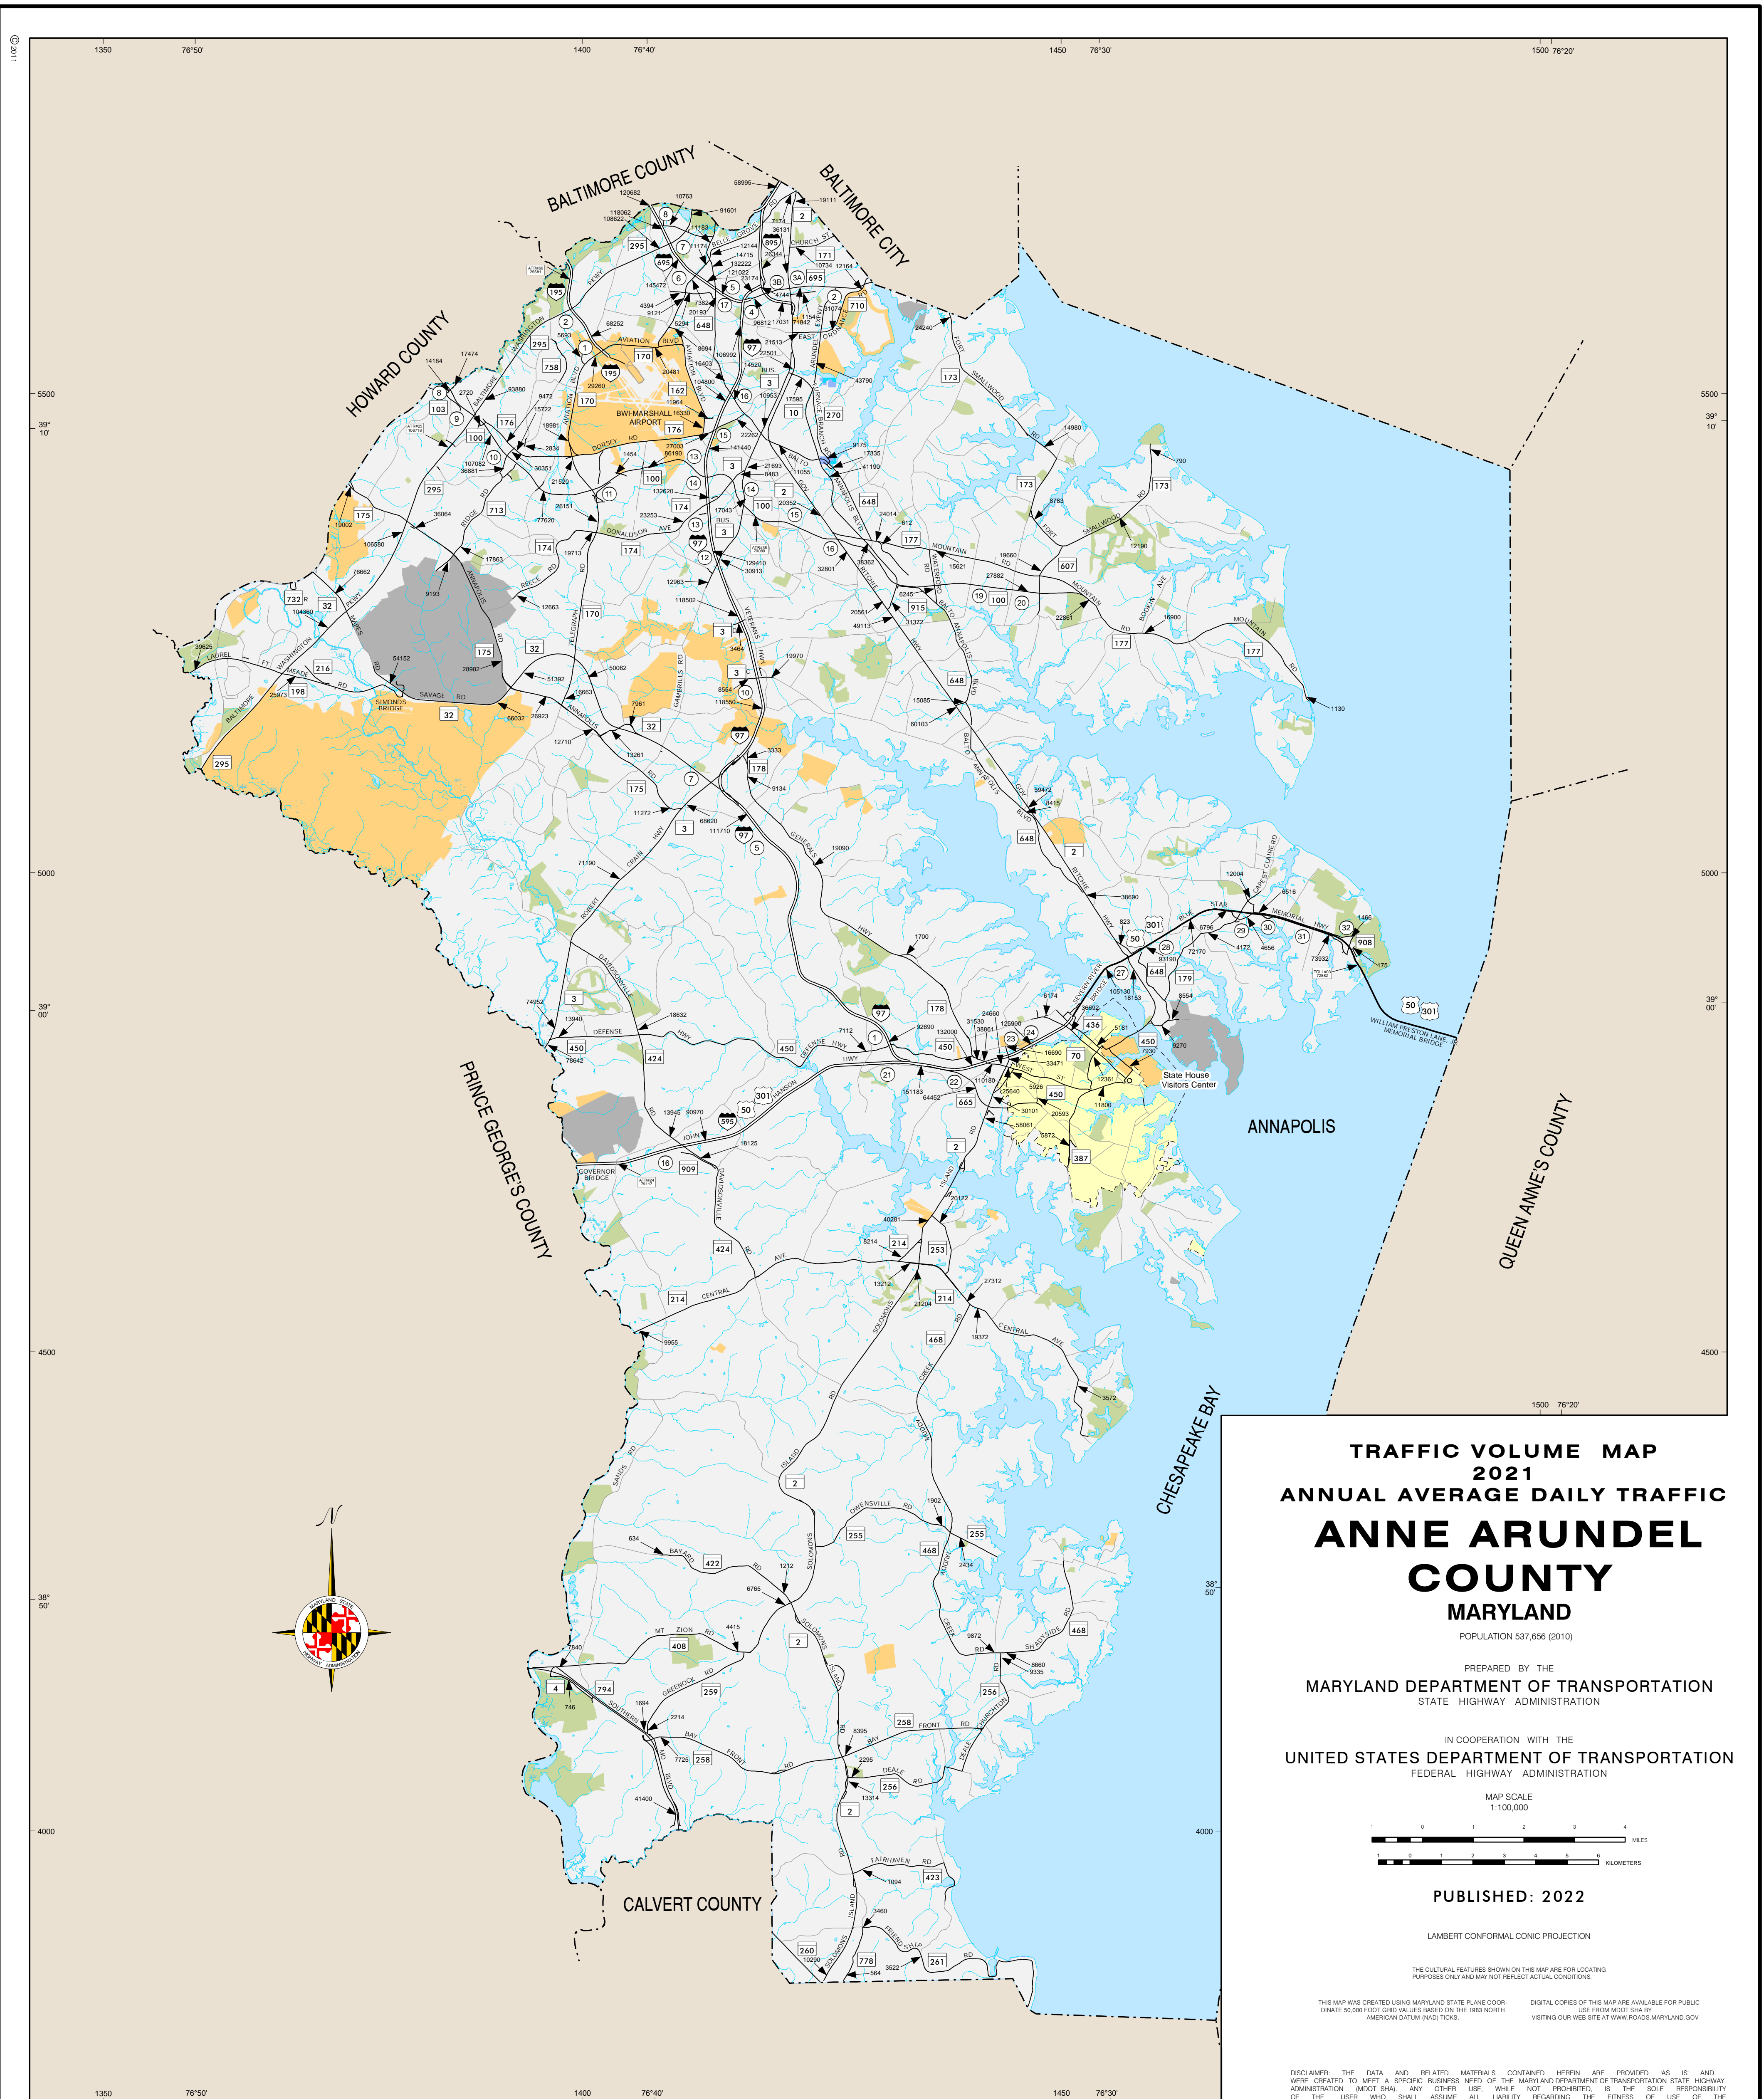

**AUTOMATIC TRAFFIC RECORDER and TOLL LOCATION DESCRIPTION**

LOCATION	COUNTY	LOCATION DESCRIPTION	LOCATION	COUNTY	LOCATION DESCRIPTION
ATR#01	Allegany	MD 36 at George's Creek Bridge	ATR#54	Baltimore	IS 695 West of Cromwell Bridge Rd
